LOCATION:	CMC Creative Space, District 7 – Hybrid
WORK SCHEDULE:	Monday to Friday, 09:00am - 06:00pm
SALARY RANGE:	up to 70M Gross

Company Description

Our client is Southeast Asia's leading superapp. We are dedicated to improving the lives of millions of users across the region by providing them everyday services such as deliveries, mobility, financial services, enterprise services and others. More than that, we provide the opportunity for them to have a better life. And that aspiration starts inside company because we believe in a seamless blend of work and home life, making every aspect of life better for all.

Job Description

Get to know the team

The FinApp team is a part of the larger Finance Cortex division within company. This team primarily develops software solutions that automate and streamline financial processes.

Get to know the role

As a Fullstack Engineer on the FinApp team under Finance Cortex, you will play a pivotal role in developing software that automates and streamlines financial processes within company. You will be responsible for designing, implementing, and maintaining both our financial applications' backend and frontend components. Your role is crucial in delivering a seamless and robust user experience, contributing to both backend and frontend development efforts.

The day-to-day activities

- Design, develop, and maintain key components of the financial applications, including the SDK, CI/CD pipelines, daemons, UI, and user interfaces.
- Work closely with other engineers to integrate frontend and backend services seamlessly.
- Collect and analyze user feedback, identify areas for improvement, and prioritize feature development accordingly.
- Implement best practices for web development, ensuring high-quality code and adhering to performance, security, and accessibility standards.
- Proactively identify and troubleshoot issues, implement fixes, and ensure application stability and performance.

- Collaborate with designers to create responsive and user-friendly interfaces

The must-haves

- Minimum 1 year of experience in both backend and front-end development.
- Proficiency in frontend technologies such as React or Angular. React is preferred.
- Familiarity with backend technologies such as Java, Golang, Python, MySQL, and AWS services.
- Excellent problem-solving and analytical skills.
- Good verbal English communication skills.
- Proven ability to work both independently and as part of a collaborative team
- **Tech stacks: Java, Golang, MySQL, AWS, ReactJS**
